**Subject:** HW47 - visit.

Today at 2pm today OSC Rupert and SAO McDonald visited [Ex. 6 - Personal Privacy] HW47 [Ex. 6 - Personal Privacy] to share the results of the recent well sampling and offer her drinking water. [Ex. 6 - Personal Privacy] indicated that PaDEP had called her this past Wednesday and told her that her water had tested positive for arsenic at 79 ppb. She said that PaDEP called Cabot and asked them to provide water to her, which Cabot did. As a result Ms. [Ex. 6 - Personal Privacy] had enough for water for her cooking and drinking purposes. [Ex. 6 - Personal Privacy] indicated that Cabot also resampled her well. [Ex. 6 - Personal Privacy] indicated she had an operating reverse osmosis (RO) unit that evidently was not functioning properly. The system was being repaired while we were there. [Ex. 6 - Personal Privacy] said that Cabot had sampled her well in 2010 but, had never provided a copy of the results. It is uncertain how long [Ex. 6 - Personal Privacy] has been drinking arsenic tainted water. She mentioned that at some time in the past her water tested positive for arsenic but, at levels around 1-4 ppb. [Ex. 6 - Personal Privacy]

**Ex. 6 - Personal Privacy**

We offered to have ATSDR visit with her next week. She is interested and SAO McDonald will be scheduling a visit next week when Karl Markiewicz, PhD is available.

Rich
